Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1-12 are rejected under 35 U.S.C. 102(e) as being anticipated by Huston et al.

Huston et al disclose an imaging device loaded with a sheet of print media (Fig. 2), a method for automatically configuring the imaging device to form images on the sheet of print media (Col. 1, lines 45-60), the method comprising reading a single marking comprising data (i.e. indicia 156, 158, Fig. 5) from at least one side of the print media, the data providing an orientation indication of the print sheet with respect to how the print sheet is loaded in the imaging device (i.e. print medium orientation, Col. 1, line 58 and Col. 7, lines 50-65), the data further comprising a set of media parameter information corresponding to the sheet of print media and configuring the imaging device to form images on the sheet of print (Col. 7, lines 50-65) media based on at least a portion of the data.

Huston et al further disclose wherein the data is imprinted as a single mark on each edge of the sheet of print media such that the imaging device senses the data

independent of any particular orientation of the sheet of print media (i.e. indicia can be read in both horizontal or vertical directions, Col. 8, lines 30-35); wherein the data is a single barcode that is imprinted on each edge of the sheet of print media (i.e. indicia 150, Fig. 10); wherein the orientation indication identifies whether the sheet of print media is face-up or facedown (Col. 7, lines 50-65), and which edge of the sheet of print media is being read by the imaging device (i.e. print medium side ness, Col. 1, line 59); a computer-readable medium (i.e. barcode 156, Col. 7, line 51) comprising computer-executable instructions for automatically configuring an imaging device to form images on a sheet print media that is loaded into the imaging device.

Response to Arguments

3. Applicant's arguments with respect to claims 1-12 have been considered but are moot in view of the new ground(s) of rejection.
